

ATTENTION! UPDATED INSTRUCTIONS

MasterFlush Touchpad Now Monitors Two Tank Levels*

INDICATOR LIGHTS

"Power On" Indicator ③

On the MasterFlush touchpad flush panel, a steady green "Power On" light (3) indicates when electrical power to the toilet is activated. A momentary flashing green light indicates when flush mode is changing.

Tank Level Indicator ④

The MasterFlush touchpad panel includes a bi-colored light (4) with two functions:

- When the light glows YELLOW, the tank is three-quarters full*.
- When the light glows RED, the holding tank is full and should be pumped out. When the RED light is illuminated, electrical power to the toilet automatically shuts off to prevent possible overfilling of the holding tank.

* When connected to multiple-level holding tank monitor system.

Note

If toilet system is equipped with Vimar or Gewiss flush switches and indicator lights supplied by Dometic, the tank level indicator light only monitors when the holding tank is full, and only glows RED. Electrical power to the toilet shuts off to prevent possible overfilling of the holding tank.
